WORK EXPERIENCE

AUM-ISUZU

Oct 2024 – Oct 2025

Data Science Analyst

Riyadh, Kingdom of Saudi Arabia

- Developed **Python-based predictive analytics dashboards** in Streamlit to forecast sales, track customer metrics, and monitor dealership performance — supporting **demand forecasting and customer behavior analysis** across 5 new branches in KSA.
- Leveraged **Azure cloud services** to deploy ML models and build real-time reporting pipelines, driving **1.8x revenue growth** and **60% new customer acquisition** across KSA branches.
- Demonstrated **continuous learning** by applying ML best practices and advancing the company's **AI-readiness strategy**.

XCEEDANCE

Aug 2022 – Sep 2024

Data Science Analyst

Noida, India

- Led end-to-end development of a multi-class document classification model** (98% accuracy across 5 classes), improving efficiency and saving substantial processing time.
- Trained NER models using **Flair with BERT and DistilBERT**, improving efficiency of data extraction from email chain.
- Automated manual data extraction processes**, cutting project time by **10x** and improving **data flow**, and implemented a **CI/CD pipeline on Azure with Docker** for streamlined deployment.
- Built a Streamlit web app using LangChain and OpenAI API** to process claim PDFs, enabling users to **query documents and retrieve answers instantly** for faster information access.
- Recognized as a **Shining Star** for outstanding performance during Q2 2023 at Xceedance.

Artenal

May 2021 – Jul 2021

Computer Vision Intern(WFH)

Vancouver, Canada

- Collaborated on computer vision projects, including image annotation and training using **YOLOv4** and **TensorFlow**. Notably, I developed models for **Tomato Detection and Tomato Disease Detection**, leveraging Python, CNN, and open-cv. These projects contributed to my practical experience in image analysis and object detection.
- Technology:** Python | CNN, Yolo | TensorFlow, Keras | open-cv

The Spark Foundation

Apr 2021 – May 2021

Data Science and Business Analyst Intern(WFH)

Singapore, Singapore

- Student marks prediction using supervised machine learning to predict the student marks by giving number of hours of study.
- Classify the iris flower by training the model with the iris data set using Random Forest Classifier.
- Technology:** Python | scikit-learn | Random Forest Classifier

EDUCATION

Jamia Millia Islamia

Aug 2018 – May 2022

B.Tech in Mechanical Engineering | Additional Coursework: NLP

GPA : 9.06

TECHNICAL SKILLS

CORE : Machine Learning, Gen AI, Visualization, NLP, Computer Vision, LLMs, YOLO.

Framework : Pytorch, TensorFlow, LangChain, nbdev, Streamlit, Pandas, Matplotlib, Scikit-learn, NLTK, OpenCv.

Tools : Python, C, Verilog, Azure, Ms-excel, Langsmith, Power BI, Tableau, MySQL.

Accomplishments and Certifications

- Led a team of four to secure a top-9 rank out of 400 teams in IIT Bombay's e-Yantra competition by designing a multi-functional LFR using Altera Cyclone IV FPGA and sensors.
- Led the design team of Team Stealth JMI for 6 months, designing and manufacturing a Quad Bike (QBDC).
- Performance Evaluation of Diesel Engine With Blended Biodiesel using ML [DOI: 10.1201/9781003395768-13](#)
- Computational Study on the Diffuser of Formula Racing Car. [DOI: 10.1007/978-981-99-1894-2_41](#)
- ChatGPT Prompt Engineering for Developers.
- Deep Learning Specialization | DeepLearning.ai

PROJECTS

Intelligent Information Extraction (INext)

4–5 Months

Xceedance | Insurance Domain

- Designed and developed an **end-to-end intelligent information extraction system** to automatically extract **80+ insurance-specific entities** from email bodies and PDF attachments with confidence scores.
- Implemented a **multi-model ensemble pipeline** using **BERT-based NER** for text extraction, **ResNet50 CNN** for document/image-based PDF classification, and **Tesseract OCR** with custom PSM configurations.
- Reduced processing time from **15–20 minutes (manual)** to **1–2 minutes (automated)** per case, significantly improving operational efficiency.
- Improved data accuracy and consistency, enabling faster downstream **claims processing and decision-making**.
- Actively involved in **change requests (CRs), bug fixes, and model enhancements** to improve extraction accuracy and scalability.
- **Tech Stack:** Python, BERT, ResNet50, Tesseract OCR, NLP, Computer Vision

Document Classification of Encrypted PDFs Using CNN

1 Month

Xceedance | Insurance Automation

- Built a **CNN-based document classification system** for encrypted insurance PDFs where text extraction was not feasible.
- Converted encrypted PDFs into images and trained a **custom CNN model** using OpenCV and deep learning techniques.
- Achieved **98% classification accuracy** across multiple insurance document types.
- Eliminated manual document segregation and enabled **faster automated document routing**.
- This was my **first production-grade project**, laying the foundation for large-scale document automation initiatives.
- **Tech Stack:** Python, Custom CNN, OpenCV, Deep Learning

Retrieval-Augmented Generation (RAG) System for Insurance Queries

1–1.5 Months

Xceedance | Claims Knowledge Retrieval

- Developed a **RAG-based question-answering system** for insurance documents including claim files, policy wordings, and SOPs.
- Implemented **FAISS vector database** for efficient similarity search over embedded insurance documents.
- Used **OpenAI embeddings and LLM APIs** to generate **context-aware, grounded responses** based on retrieved documents.
- Built a **Streamlit-based UI** enabling non-technical users to query large volumes of PDFs and receive instant answers.
- Significantly reduced manual document lookup and improved **turnaround time for claims analysis**.
- **Tech Stack:** Python, FAISS, OpenAI API, LangChain, Embeddings, Streamlit

Breast Cancer Detection Using Machine Learning

1 Month

Academic Project | Healthcare Analytics

- Developed a **machine learning model** for breast cancer detection using **25 clinical features**.
- Performed **data preprocessing, feature selection, and model evaluation** to improve prediction accuracy.
- Deployed the trained model on **Heroku**, enabling real-time predictions via a web interface.
- Strengthened understanding of **end-to-end ML pipelines, deployment, and applied healthcare analytics**.
- **Tech Stack:** Python, Scikit-learn, ML Algorithms, Heroku
